Amwins Specialty Casualty Solutions (ASCS) is an MGA and specialty insurance program creator with deep expertise in underwriting, loss control and claims handling. Through our differentiated, exclusive programs, we write approximately \$1 billion in annual premium for a select group of specialty niche industries.

The Amwins Public Entity Buffer Workers' Compensation Program (APE Buffer) is a tailored workers' compensation solution offering the flexibility of attaching above a self-insured's retained layer and providing capacity up to the statutory market's attachment point. The **APE Buffer** product affords clients the flexibility to choose their own claims and risk management providers. It also empowers clients to administer a risk management program tailored specifically to their needs, while returning substantial savings back to the entity.

APE Buffer is written through State National Insurance Company, an AM Best "A" X rated carrier with claims oversight by CCMSI.
